

Side Mount Parts Received if Unassembled

Unassembled Pieces

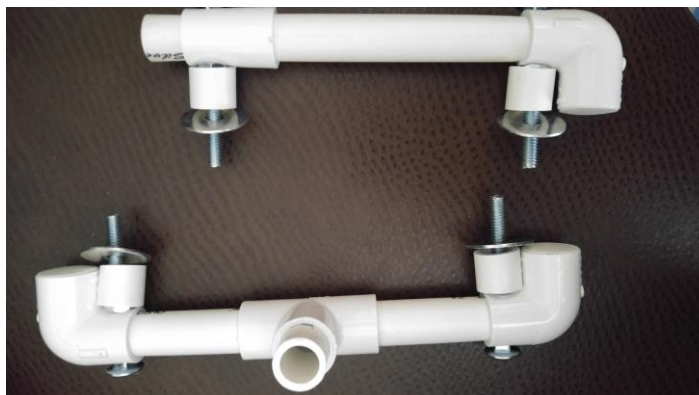

Put small piece of PVC onto
both bolts

Put metal washers onto
bolts

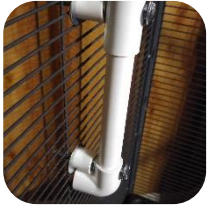

Ready to assemble on the
cage

Attaching Side Mount to Cage

Same Process for Both Types

Put bolts through cage bars.
Make Sure small pvc pipe is facing up.
(can usually position so it won't fall)

Hold onto one bolt
(this helps to keep it from falling)

Put White Washer Disk onto one bolt

Put Metal Washer onto bolt

Put Wing Nut onto Bolt

Complete Same Process for Second Bolt

Assembly now looks like this inside cage

Installing the Wheel on a Side Mount

Make sure the small piece of pvc pipe is facing the top of the cage

Sit the wheel onto the piece of pipe

Position wheel correctly and then push down tightly onto the pipe

It is imperative that the piece of pvc pipe points toward the top of the cage. If not, the wheel WILL fall off.
